

The Implicit Model - A concept for research, and a case for thinking, objectivity, and theory.

Date : March 4, 2020

This is an introduction to some broad theoretical thinking I have had over the last few years. It attempts to:

- Describe what it is a Bowen/Systems coach does for a client if they don't "fix" anything

- Lay down a theoretical basis for that description.

- Address the problem of the live of anthropocentric subjectivity in terms like "objectivity," "thinking," "religion," and "science."

Here is the referenced video on the 9 Guidelines for Natural Systems Models:
